"Assistive Technology" was initially developed to level the playing field, in the working and academic world, for people with disabilities.

Before we dive in, let's cover a common question: **"What Is Assistive Technology?"** For those who don't know, assistive technology is any kind of software, equipment, or product that helps a disabled individual improve, increase, or maintain specific functional capabilities

My intention is to approach this series of articles from 3 different directions.

1. I would like to look at the technologies that are available to enhance our lives in everyday functions.

    a. Both around the house, and what is trending the cutting edge:
        i. For example what is trending:

b.   And around the house:

2.   I would like to explain how each of these devices technically functions within our environment.

3.   I would like to explain how to install these devices so that we can make them functional within our environment ourselves.

a.   How to hook up your echo

This will all be included with in a variety of the types of new tools (toys) that are available in today's marketplace. This will include linkages by different organizations on what is "The Latest and Greatest"
